

What survives extraction?

48 source responses → 192 extracted claims

a Follow the original meaning

b Does the pattern hold across scenarios?

Same colour key; each bar partitions one scenario. Labels report fully preserved shares; n = focal-claim occurrences.

Synthetic assistant pilot · provisional unblinded self-review · 24 panels nested in four scenarios.

All 28 omissions are accounted for by the eight-claim cap. Grouping loss has not been isolated.
