

Shorter text. The same disagreement?

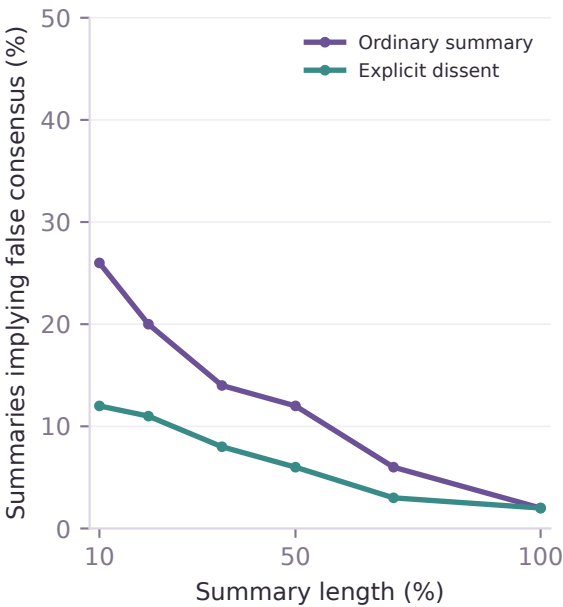

ILLUSTRATIVE ONLY · Simulated data · No measured platform performance

Preserve the objection, its reason and its conditions—not just the number of dissenters.

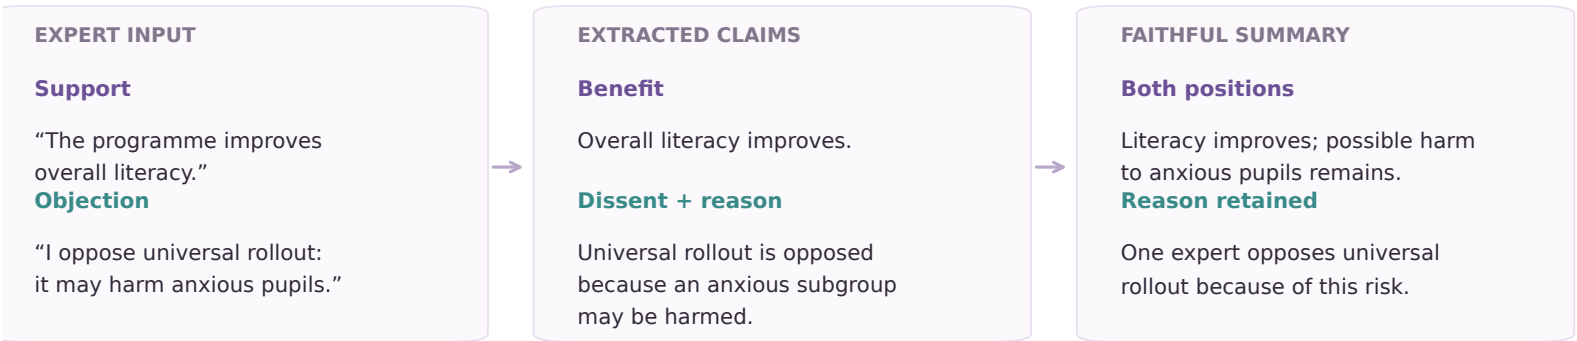

a Does the substance survive?

b Is disagreement erased?

c Trace the reason—not only the stance

A stance-only summary—"There is support and disagreement"—loses the reason and the subgroup.

100 hypothetical cases at six budgets; faint paths show 20 per category. Bands: IQR; bold lines: medians (a), rates (b). False consensus means implying shared agreement despite unresolved source disagreement; both methods are hypothetical.

DESIGN SIMULATION — NOT RESULTS. Category differences and method benefits are constructed, not measured. Panel c is an authored example. A real test needs independently annotated reasons, conditions and blinded summary judgments.
