

Faithfulness and coverage of saved extractions

1 consultation · 8 opening responses · 2 extraction repeats · provisional review

Filled marker: unresolved card receives no credit (40% coverage; 85.7% faithfulness).

Open marker: unresolved card receives credit (46.7%; 100%). Each endpoint represents both repeats. The connecting line is an annotation bound, not a confidence interval.

Core claim content only; expert counts and attribution are not scored here. One assistant reviewed these labels without blinding. No density estimate from a single consultation. Both saved outputs hit the 2,500-token cap; this does not isolate unconstrained extraction ability.
